

ReliaQuest for Endpoint Detection & Response

Maximize your EDR investment with ReliaQuest GreyMatter®

With digital transformation, the use of cloud application services, third-party business applications, and bring your own device (BYOD), the perimeter has dissolved. To get between a user and their application, endpoint detection and response (EDR) allows an enterprise to get a deep set of forensic details on each host for quicker threat detection, analysis, and containment. EDR increases enterprise visibility and results in faster recognition and remediation of threats.

While EDR is an essential component to a security program's defense, organizations often struggle with properly optimizing the system and integrating with the rest of the environment to ensure effective incident response against evolving threats.

The ReliaQuest GreyMatter® security operations platform, built on an Open XDR architecture, can maximize the effectiveness of your EDR by providing visibility and integration across your security toolset. With visibility and higher fidelity tuning and detection content, customers can decrease false positives and automate across the security lifecycle to speed response.

Increase Visibility with Bi-Directional Integration and Data Stitching

- Access all initial artifacts an analyst needs to start at the investigation stage and skip data gathering across multiple tools with alert-level automation.
- Collects and normalize data, on demand, directly from EDR and other sources, such as SIEM, cloud providers, and third-party apps in one, unified view.

Reduce Complexity of Threat Response with EDR Playbooks

- Respond faster across devices by kicking off playbooks, such as isolating a host, banning a hash, and removing malicious files.
- Decrease false positives with continuously developed, tuned, and updated content mapped to your business risks.

Manage Risk by Mapping Behaviors to the MITRE ATT&CK Framework

- Map behavioral threat feeds to MITRE ATT&CK, NIST, and other security frameworks and get higher alert fidelity.
- Actively model and communicate risk tolerance based on the evolution of your business, benchmarked against past performance and industry peers.
- Identify misconfigurations and detection capabilities with continuous attack simulation.

Accelerate EDR Time-to-Value

ReliaQuest GreyMatter maximizes the effectiveness of your EDR by decreasing false positives and speeding time to respond with automation across the security lifecycle. With a foundation from tuning and custom content, GreyMatter layers on proactive threat hunting and automated attack simulations to continuously improve security posture.

Custom behavioral IOCs produce higher-fidelity alerts across all devices within your organization. Proactive threat hunting campaigns across your security ecosystem drive better abnormality detection, effectively showing “known good” vs. “known bad.” Customer-specific policies based on applications, software, and business use cases define enforcement levels for any assets or compliance requirements tailored to all operating systems.

ReliaQuest GreyMatter leverages a combination of your EDR technology alongside other sources in your security ecosystem to unify detection, investigation, response, and resilience.

About ReliaQuest

ReliaQuest, the force-multiplier of security operations, increases visibility, reduces complexity, and manages risk with its cloud-native security operations platform, GreyMatter. ReliaQuest GreyMatter is built on an XDR architecture and delivered as a service anywhere in the world any time of the day, by bringing together telemetry from tools and applications across cloud, on-premises, and hybrid cloud architectures.

Hundreds of the world’s most trusted brands team up with ReliaQuest to enable them to extend detection and response across cloud, endpoint, and network infrastructures, leveraging relevant data from both security and business applications. ReliaQuest is a privately held technology unicorn headquartered in the U.S. with multiple global locations. For more information, visit www.reliaquest.com.

ReliaQuest customers that have integrated an EDR into GreyMatter average 39% better MITRE ATT&CK® coverage compared to those without an EDR.
